

Combined Metals Material Datasheet

Alloy 434 Stainless Steel					UNS: S43400 EN DIN: 1.4113			
<p>Description: Type 434 is a modification of Type 430, and one of the most widely used “non-hardenable” ferritic stainless steels. The addition of molybdenum increases this alloy’s corrosion resistance and its attack from many de-icing chemicals. It also provides good heat and oxidation resistance up to 1500 °F as well as good mechanical properties. Heating above the critical austenite forming temperature leads to a room temperature microstructure of ferrite and fine martensite. As-annealed the alloy is ferritic. Maximum service temperature is 1500 °F.</p> <p>Applications include: Automotive trim, appliances, combustion chambers, architectural</p> <p>Industries supplied include: Automotive, Oil & Gas, Food Processing</p>								
Nominal Composition								
	C	Mn	P	S	Si	Cr	Mo	Fe
min	-	-	-	-	-	16.0	0.75	BAL
max	.12	1.0	0.04	0.030	1.00	18.0	1.25	-
Physical Properties								
	At 70°F				At 20°C			
Density	0.28 lb/in ³				7.74 g/cm ³			
Modulus of Elasticity (E)	28.0 x 10 ³ ksi				193 GPa			
Coefficient of Expansion	5.8 µin/in-°F (32-212°F)				10.4 µm/m-°C (0-100°C)			
Electrical Resistivity	23.68 µohm-in				60 µohm-cm			
Thermal Conductivity	15.1 Btu-in/ft ² -hr- °F (212°F)				26.1 W/m-K (100°C)			
Applicable Specifications								
Strip & Sheet	ASTM A240							
Typical Mechanical Properties Typical Room Temperature Mechanical Properties								
Condition	Tensile Strength (UTS)	0.2% Offset Yield	Elongation in 2" (50.8 mm)		Hardness Rockwell			
Annealed	80 ksi (655 MPa)	50 ksi (290 MPa)	28%		75 HRBW			
Typical mechanical properties are based on ASTM A240
